Person reviewed: Themiya

Landing Page

Is the landing page interesting? Why/Why not?

I enjoy the framing of studying the unseen and using problem solving to support development of better and sustainable technologies. Perhaps the images used can be of higher quality and without stretching.

I am no expert on landing pages but the page could be more brief (scale down 0.5-0.8 times). Additionally, some sentences *could* be shortened.

Is the content clear and well ordered? If not, how could it be improved?

Yes it is. It introduces the topic of electrical engineering, them being a student, their career goals, their skills, and their aspirations.

Does the landing page give background about the writer?

Yes. They are an electrical engineering student at UTS and they have skills of "key engineering tools, including MATLAB, C programming, AutoCAD, and SolidWorks."

Does the landing page tell the writer's story?

Yes. See previous questions.

Does the landing page sell the writer? (Does it make you want to know more about him/her?)

Yes but can do with some improvements. As said prior, scale down the paragraphs and some sentences.

What more would you like to know about the writer?

As a student I am happy with the detail.

Jeremy Chu (14178077) for 41055

Resume

Is all important information given?

Yes. However, there is arguably too much information; some sections should be reduced in length. For example, career objectives, some dot points in employment, key skills. Also, in technical skills, it is arguably redundant to state you know how to use windows 10 and 11 and even macOS – these are very common operating systems that most people on the street probably know how to use.

Is the information organised logically? (Most recent employment first)

Yes.

Does the resume look like a professional document?

This is a good start for a professional resume, however requires some major formatting changes and some content changes as described below.

Is the resume easy to read?

The structure of content is acceptable however the aesthetic arrangement could see some improvements with fonts, paragraph spacing (reduce this), sentence length/dot points (shorter), placement of information (some details aren't aligned with the rest).

too much space

too much space

Career Objective

I graduated with a degree in Electrical Power Engineering Honors from the University of Technology Sydney, and I have become increasingly interested in renewable energy and power systems. I was drawn to engineering since I have always been drawn to understanding energy systems and how they can benefit our lives. The move toward cleaner or green energy sources is now being accepted around the world, and I wish to be involved with coming up with innovative ways to make power systems work smarter and better.

too much space

During my time at university, I participated in several projects that included developing control systems for renewable energy integration and the design of power systems. All these projects assisted me in developing my problem-solving and technical abilities, as well as provided me with experience using software and hardware such as MATLAB, C programming language, AutoCAD, and SolidWorks. In addition to my technical abilities, I am hard-working, flexible and willing to continue learning

UTS Rocketry **Jan 2026 - Present**

- Designed and analysed control strategies for rocket flight stability and attitude control, including feedback loop development and system response analysis.
- Modelled and simulated rocket dynamics in MATLAB/Simulink, supporting

Are the writer's skills presented in the best way?

While this is a good start for a resume, improvement can be made in departments described above.

Jeremy Chu (14178077) for 41055

Answers to the questions

Does the writer add pictures that represent their internship?

Yes. Some apparatus (relating to manufacturing as well as separation technologies?) is shown, the "final product" of iron(?) produced is also shown.

Does the writer answer the questions in sufficient detail to understand their experiences during their internship?

Yes. Each question is answered methodically and in good detail which helps get a picture of their situation.

Does the writer give a good indication of the writer's skills and motivation?

Yes. They mention of skills they learnt / refined such as concepts relating to "well-designed power distribution, control systems, and energy management strategies are critical", "scalability, efficiency, and sustainability are imperative to industrial operations", and general systems engineering when working with large teams.

They reference how this has helped hone in their interest in "power systems, renewable integration, or energy infrastructure, where I can help design and optimise reliable electrical networks."

Does the writer's value proposition sell their ability to an employer? Does the value proposition seem realistic?

Yes. They use examples and direct reference to experiences and skills learnt during their internship to support their arguments for why they may meet a job criteria required (e.g., systems thinking, communication skills, power systems). It is realistic as it does not boast or oversell skills which would be unrealistic for a student to have.

Are the writer's career aims clear?

Yes. Multiple times they reference their interest in the general power sector such as energy infrastructure and renewable energy technologies.

Jeremy Chu (14178077) for 41055

Person reviewed: Lee

Landing Page

Is the landing page interesting? Why/Why not?

Yes. The images shown are the highlight of the landing page, they appear to show real and personal projects which is fantastic to see.

Is the content clear and well ordered? If not, how could it be improved?

The content is clear and well ordered. An introduction to themselves is clear as well as their interest and aspirations to work on the “brains” of a machine.

Does the landing page give background about the writer?

Yes. It is explained that they are a final year mechatronic student (albeit in a round-about way) with interest and experience in controlling and monitoring (mechatronic) systems.

Does the landing page tell the writer’s story?

To an extent. It is known that they are a final year mechatronics student with an interest in the “brains” of a machine. Maybe more detail can be provided in the latter in the form of their best project?

Does the landing page sell the writer? (Does it make you want to know more about him/her?)

Yes. The page provides some surface-level detail which a potential employer may want to know more about in the form of technical detail. Read above response for more detail.

What more would you like to know about the writer?

More about their personal projects and specific (highlighted) achievements in control. Though this can also be explained at a later section / resume.

Jeremy Chu (14178077) for 41055

Resume

Is all important information given?

No. There is no previous employment section (where your internship should be) and there should be a references section.

Is the information organised logically? (Most recent employment first)

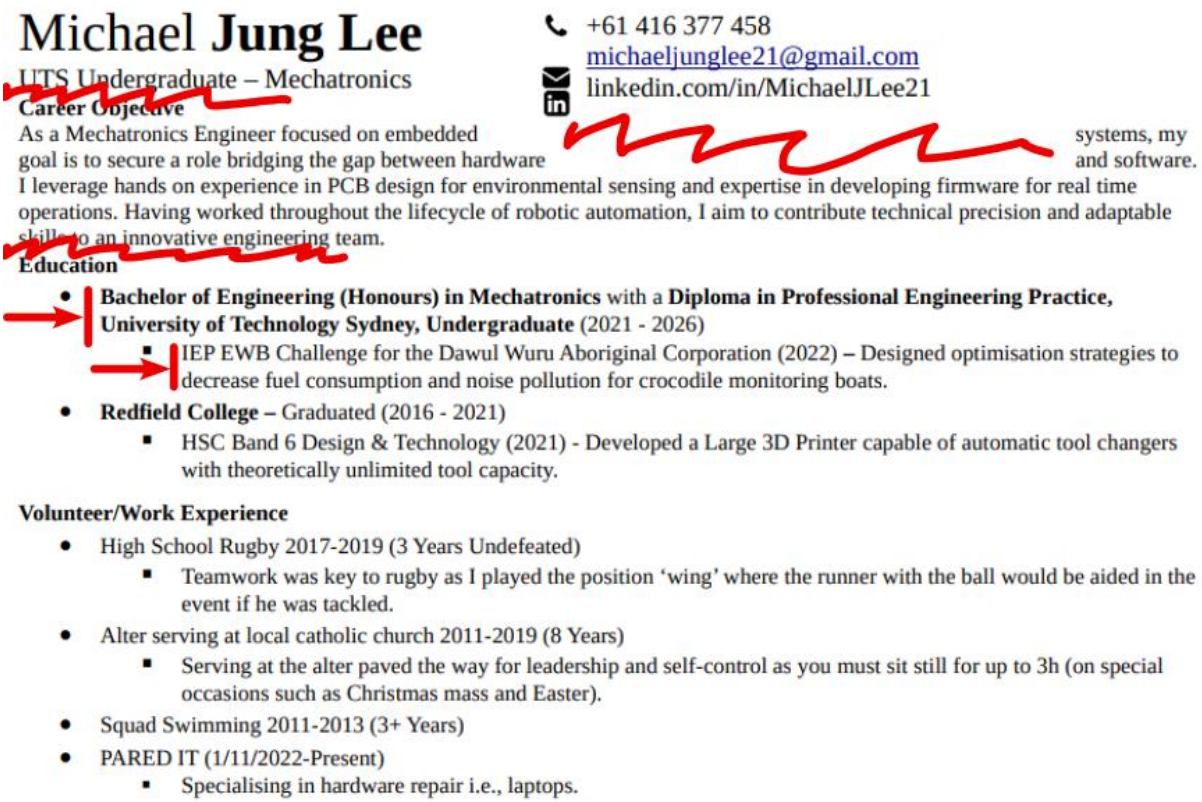
Yes, but improvement can be made. See below comments.

Does the resume look like a professional document?

This is a good start for a resume and is unique, especially in the top "banner". However, improvement can be made in formatting and the level of detail provided.

Is the resume easy to read?

It is a good start however some of your formatting breaks such as in career objective. The content can appear cluttered so perhaps reduce the level of detail in some areas and also adjust paragraph spacing. Some of the content can appear disjointed, especially with sub-titles and dot points – I recommend adjusting spacing, fonts, and size to be less "severe". Personal projects – while impressive in quantity of projects – is too much in my opinion, I recommend choosing only your best projects which best highlight your strengths.



Michael **Jung Lee**

UTS Undergraduate – Mechatronics

+61 416 377 458
michaeljunglee21@gmail.com
linkedin.com/in/MichaelJLee21

Career Objective

As a Mechatronics Engineer focused on embedded systems, my goal is to secure a role bridging the gap between hardware and software. I leverage hands on experience in PCB design for environmental sensing and expertise in developing firmware for real time operations. Having worked throughout the lifecycle of robotic automation, I aim to contribute technical precision and adaptable skills to an innovative engineering team.

Education

- **Bachelor of Engineering (Honours) in Mechatronics** with a **Diploma in Professional Engineering Practice, University of Technology Sydney, Undergraduate** (2021 - 2026)
  - IEP EWB Challenge for the Dawul Wuru Aboriginal Corporation (2022) – Designed optimisation strategies to decrease fuel consumption and noise pollution for crocodile monitoring boats.
- **Redfield College –** Graduated (2016 - 2021)
  - HSC Band 6 Design & Technology (2021) - Developed a Large 3D Printer capable of automatic tool changers with theoretically unlimited tool capacity.

Volunteer/Work Experience

- High School Rugby 2017-2019 (3 Years Undefeated)
  - Teamwork was key to rugby as I played the position 'wing' where the runner with the ball would be aided in the event if he was tackled.
- Alter serving at local catholic church 2011-2019 (8 Years)
  - Serving at the alter paved the way for leadership and self-control as you must sit still for up to 3h (on special occasions such as Christmas mass and Easter).
- Squad Swimming 2011-2013 (3+ Years)
- PARED IT (1/11/2022-Present)
  - Specialising in hardware repair i.e., laptops.

Are the writer's skills presented in the best way?

To an extent. However, brevity would greatly strengthen this resume in showcasing only the most pertinent skills to the employee.

Jeremy Chu (14178077) for 41055

Answers to the questions

Does the writer add pictures that represent their internship?

No.

Does the writer answer the questions in sufficient detail to understand their experiences during their internship?

There is a high-level description of their experience ("troubleshooting and fixing robotic systems", "hands on experience with high end expensive tooling and hardware") during the internship however specific tasks or goals were not described. This makes it difficult to relate to what was actually being done and skills learnt.

Does the writer give a good indication of the writer's skills and motivation?

The writer's skills are only described in general terms as described above, so it is difficult to gauge. Their motivation is explicitly stated as not having changed trajectory (i.e., interest in the "brains" of a machine), however this does not change the fact that they enjoyed the manufacturing aspects of engineering.

Does the writer's value proposition sell their ability to an employer? Does the value proposition seem realistic?

No. It is mentioned that you have a higher "ability [than the average] student" and have experience with "high end expensive tooling and hardware" however you do not explicitly state and give examples of this. A potential employer may see this and think if you are writing checks you cannot cash or think you are being too boastful.

Are the writer's career aims clear?

Generally, yes. It is clear that the writer has a passion in the ability to control mechanical and mechatronic systems – however exactly what is not known.

Jeremy Chu (14178077) for 41055

Person reviewed: Muhammad

Landing Page

Is the landing page interesting? Why/Why not?

Yes. It shows relevant images, including the “About Me” (whether intentional or not, the stepped farming image). The text is carefully formatted and written.

Is the content clear and well ordered? If not, how could it be improved?

Yes.

Does the landing page give background about the writer?

Yes, it does. I understand they are a double major (mechanical and finance) with a passion for the construction industry and knowledge of trenchless pipeline solutions.

Does the landing page tell the writer’s story?

Yes. See above.

Does the landing page sell the writer? (Does it make you want to know more about him/her?)

Yes it does. Their skills and interests are clearly described which a potential employer may want to know more above in detail.

What more would you like to know about the writer?

Maybe a brief image caption to understand your internship work? But not necessary as you should elaborate later anyways.

Jeremy Chu (14178077) for 41055

Resume

Is all important information given?

No. A section on referees would be good to have. Relevant coursework of maths should be a given for most engineers, what about more specific subjects? Also, grades attached would be good to have to "sell yourself" more.

Is the information organised logically? (Most recent employment first

To an extent. Your experience section is currently an amalgamation of work experience and projects, ideally these should be separate.

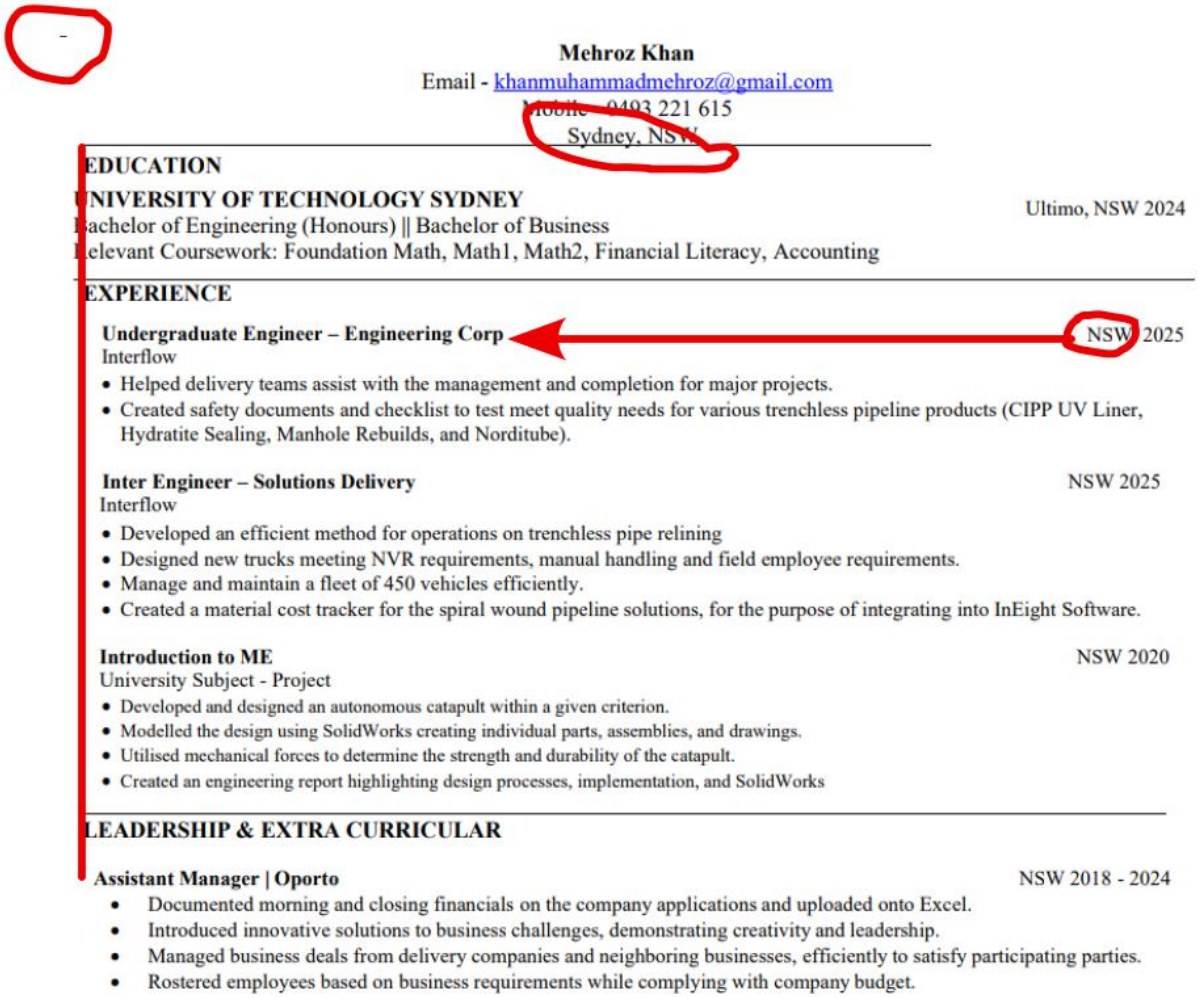
Does the resume look like a professional document?

At a glance yes but some improvements can be made with organising content/structure and formatting. See below.

Is the resume easy to read?

It can be difficult in parts. There is an aberrant "-" in the top left corner, and your banner with personal details intersects with the horizontal separating line. Your "EDUCATION" section in capitals is good but having the "UNIVERSITY OF TECHNOLOGY SYDNEY" in the same style is not good (as this should be a subtitle), especially as your other sections do not do this. Additionally, that paragraph is aligned slightly more left than any other section. I recommend to keep the "NSW" separate from the year date, as this can be confused with a post code instead of a year date.

Jeremy Chu (14178077) for 41055



Mehroz Khan
Email - khanmuhammadmehroz@gmail.com
Mobile - 0493 221 615
Sydney, NSW

EDUCATION

UNIVERSITY OF TECHNOLOGY SYDNEY Ultimo, NSW 2024
Bachelor of Engineering (Honours) || Bachelor of Business
Relevant Coursework: Foundation Math, Math1, Math2, Financial Literacy, Accounting

EXPERIENCE

Undergraduate Engineer – Engineering Corp NSW 2025
Interflow
- Helped delivery teams assist with the management and completion for major projects.
- Created safety documents and checklist to test meet quality needs for various trenchless pipeline products (CIPP UV Liner, Hydratite Sealing, Manhole Rebuilds, and Norditube).

Inter Engineer – Solutions Delivery NSW 2025
Interflow
- Developed an efficient method for operations on trenchless pipe relining
- Designed new trucks meeting NVR requirements, manual handling and field employee requirements.
- Manage and maintain a fleet of 450 vehicles efficiently.
- Created a material cost tracker for the spiral wound pipeline solutions, for the purpose of integrating into InEight Software.

Introduction to ME NSW 2020
University Subject - Project
- Developed and designed an autonomous catapult within a given criterion.
- Modelled the design using SolidWorks creating individual parts, assemblies, and drawings.
- Utilised mechanical forces to determine the strength and durability of the catapult.
- Created an engineering report highlighting design processes, implementation, and SolidWorks

LEADERSHIP & EXTRA CURRICULAR

Assistant Manager | Oporto NSW 2018 - 2024
- Documented morning and closing financials on the company applications and uploaded onto Excel.
- Introduced innovative solutions to business challenges, demonstrating creativity and leadership.
- Managed business deals from delivery companies and neighboring businesses, efficiently to satisfy participating parties.
- Rostered employees based on business requirements while complying with company budget.

Some font sizes seem smaller than others. On alignment, some dot points don't align. Keep everything as consistent as possible. There are arguably too many dot points as well, not every section deserves 4-5 dot points, only dedicate space to the important ones which highlight your skills best.

Are the writer's skills presented in the best way?

To an extent. It is clear you have completed many activities however for reasons stated above, your skills aren't demonstrated in the best possible (easiest to read) way.

Jeremy Chu (14178077) for 41055

Answers to the questions

Does the writer add pictures that represent their internship?

Yes. Many images added showcasing the work site and simulations.

Does the writer answer the questions in sufficient detail to understand their experiences during their internship?

No. Some more detail should be given provided the actual tasks at hand. A lot of fascinating images are shown, but they don't tell the entire story. However the lessons learnt do reveal some information.

Does the writer give a good indication of the writer's skills and motivation?

The writer's skills are briefly revealed in the "lessons" learnt and value proposition sections, such as "Communications and Presentation, Excellent Cad skills, and Project Management". It would be beneficial to discuss these skills and tasks they are associated with in previous sections.

Your motivations are briefly and broadly clear in so far as you prefer the :construction side of engineering and project management". More detail would be good to have such as exactly what projects you may prefer.

Does the writer's value proposition sell their ability to an employer? Does the value proposition seem realistic?

No. While you explicitly state the key skills and value that you think you bring to a team. Some more detail of specific projects and lessons would be beneficial to provide context.

Are the writer's career aims clear?

Yes. The writer explicitly states their intent on working in the construction industry and potentially project management.

Jeremy Chu (14178077) for 41055

Person reviewed: Ralph

Landing Page

Is the landing page interesting? Why/Why not?

Yes. Some cool images of racing vehicles and a 2D schematic of a house layout are shown.

Is the content clear and well ordered? If not, how could it be improved?

Yes. If anything it could be reduced in size by 0.8 times.

Does the landing page give background about the writer?

Yes. The author makes it clear they are a final year mechanical engineering student who is interested in high-performance systems (such as F1) and analysis using engineering approaches (drafting skills, planning, performance optimisation). It appears they want to continue along this trajectory.

Does the landing page tell the writer's story?

Yes. See above.

Does the landing page sell the writer? (Does it make you want to know more about him/her?)

To an extent. I want to know what the 2D room layout is all about (most mechanical engineering students don't design room layouts like in civil or architecture), and if their projects and interests involve F1 or racing vehicles.

What more would you like to know about the writer?

See above.

Resume

Is all important information given?

Mostly. Some "Projects" would be interesting to hear more about. Some more skills would be good to list.

Is the information organised logically? (Most recent employment first)

Yes, it mostly follows conventional format.

Does the resume look like a professional document?

No. I will explain in the next section.

Is the resume easy to read?

There is too much space between *everything*. The main contributor of this are paragraphs, I recommend that instead of using the normal "ENTER" to make spaces, you can either:

a) Make sure the font size of the "space" is smaller, OR (and better);
b) Use line and paragraph spacing settings carefully.

Ralph Mina
Sydney, NSW 2212
0422 665 430
ralphmina777@gmail.com

CAREER OBJECTIVE

too much space

Final-year Mechanical Engineering student with over 2.5 years of full-time experience in the construction industry and a 12-week engineering placement focused on AutoCAD drafting for mechanical, electrical, and fire services systems. Experienced in working across multidisciplinary teams and translating technical designs into practical, buildable solutions. Seeking a graduate mechanical engineering role where I can apply my industry experience, technical design skills, and analytical knowledge to contribute to efficient, high-performance engineering projects while continuing to grow professionally.

too much space

EDUCATION

make 1 line, omit "(Degree)"

Bachelor of Engineering (Honors) **February 2024 - Present**
Mechanical Engineering (Degree)
University of Technology Sydney, Ultimo NSW

Bachelor of Engineering (Honors) **August 2021 – July 2023**
Mechanical Engineering (Degree)
Holy Spirit University of Kaslik (USEK) (Lebanon)

too much space

- 1st place in Lebanon Diploma for the Maths competition "Course aux nombres" Year 6 (2014-2015)
- Year 12 Lebanese Baccalaureate Diploma in General Science (equivalent to HSC) (July 2021 Lebanon)
- Multilingual: fluent in speaking, writing and reading three languages: English, Arabic

Some parts of your resume such as your "Mechanical Engineering Intern" section have arguably too many dot points. I recommend 4-5 max, you can combine but the space it takes is too much for what it tells about you in my opinion.

Are the writer's skills presented in the best way?

No. See reasons above.

Jeremy Chu (14178077) for 41055

Answers to the questions

Does the writer add pictures that represent their internship?

Not explicitly in this section, perhaps in the cover page?

Does the writer answer the questions in sufficient detail to understand their experiences during their internship?

Yes. I understood that their scope of work involved mapping out building plans in AutoCAD to assist in assessing compliance, safety, and the enabling of multi-disciplinary collaboration in civil construction.

Does the writer give a good indication of the writer's skills and motivation?

The writer's learnt skills and motivation are clearly demonstrated. They tell us of skills of attention to detail, importance of documentation, and professional communication. While AutoCAD may have been learnt too, this seemed secondary to the former as I am guessing another CAD software may have been used to equal success. Their motivation stated here of attention to detail, and balancing planning and reality using engineering approaches aligns with their cover page.

Does the writer's value proposition sell their ability to an employer? Does the value proposition seem realistic?

Yes. The single sentence of "ability to bridge theory and practice" is very strong. You explicitly state the specific skills that you bring from your learnt experience from the internship.

Are the writer's career aims clear?

No explicit career goal (such as position) was given, though it seems they are generally attracted to roles such as this where one can apply both theory and practice in a meaningful way.
